operation probably isn't correct. After all, algebra has been around since 1600 BC, and if a property exists, someone has probably already discovered it.

Understanding the Properties of Numbers - dummies

The Distributive Property is easy to remember, if you recall that "multiplication distributes over addition". Formally, they write this property as $a(b + c) = ab + ac$. In numbers, this means, for example, that $2(3 + 4) = 2 \times 3 + 2 \times 4$. Any time they refer in a problem to using the Distributive Property, they want you to take something through the

Later, students will see 7×8 equals the well remembered $7 \times 5 + 7 \times 3$, in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$, older students can see the 14 as 2×7 and the 9 as $2 + 7$. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an
