metaphysics underlying the book is the fairly traditional and widely-shared one that metaphysics deals with the deepest questions that can be raised concerning the fundamental structure of reality as a whole. The book is divided into six main parts, each relatively self-contained, focusing in turn on the following major themes: identity and change, necessity and essence, causation, agency and events, space and time, and universals and particulars. In an introductory chapter, the conception of metaphysics underlying the book is explained and defended against the many and varied opponents of metaphysics those students are likely to encounter. While the book makes reference when necessary to the history of metaphysics, its emphasis is on contemporary views and issues. The author's approach is not narrowly partisan, but avoids bland neutrality in matters of controversy.

Jonathan Lowe argues that metaphysics should be restored to a central position in philosophy, as the most fundamental form of rational inquiry, whose findings underpin those of all other disciplines. He portrays metaphysics as charting the possibilities of existence, by identifying the categories of being and the relations of ontological dependency between entities of different categories. He proceeds to set out a unified and original metaphysical system: he defends a substance ontology, according to which the existence of the world's one world in time depends upon the existence of

persisting things which retain their identity over time and through processes of qualitative change. And he contends that even necessary beings, such as the abstract objects of mathematics, depend ultimately for their existence upon there being a concrete world of enduring substances. Within his system of metaphysics Lowe seeks to answer many of the deepest and most challenging questions in philosophy.

Originally published in 1987. This book comprises a critical exposition of the thoughts on metaphysics of the major philosophers of the tradition. It introduces the ideas of these philosophers to students but is of interest to teachers as well. The author begins with a survey of the metaphysical writings of Plato, Aristotle, Berkeley, Leibniz and Bradley, clarifying throughout the relation of their

methods and results to those of science. He follows this with a careful study of the critical attitudes to metaphysics espoused by Kant, Wittgenstein and the Logical Positivists. In the final section he scrutinizes the attempts by Collingwood, Wisdom and Lazerowitz to rehabilitate metaphysics.

This survey of metaphysics covers the historical or classical aspects of the subject as well as those currently in the post-Wittgensteinian limelight--principally materialism, platonism, essentialism, and anti-realism. Benardete sees contemporary metaphysical preoccupations as more or less thinly disguised revisitings of those of the past, and explains how metaphysics and mathematical logic are interrelated and how metaphysical studies can illuminate both science and the humanities.
