Covers all aspects of the structure, function, neurochemistry, transmitter identification and development of the enteric nervous system This book brings together extensive knowledge of the structure and cell physiology of the enteric nervous system and provides an up-to-date synthesis of the roles of the enteric nervous system in the control of motility, secretion and blood supply in the gastrointestinal tract. It includes sections on the enteric nervous system in disease, genetic abnormalities that affect enteric nervous system function, and targets for therapy in the enteric nervous system. It also includes many newly created explanatory diagrams and illustrations of the organization of enteric nerve

circuits. This new book is ideal for gastroenterologists (including trainees/fellows), clinical physiologists and educators. It is invaluable for the many scientists in academia, research institutes and industry who have been drawn to work on the gastrointestinal innervation because of its intrinsic interest, its economic importance and its involvement in unsolved health problems. It also provides a valuable resource for undergraduate and graduate teaching.

beautifully presented, text. With extensive neuroimaging, illustrations, and neuropathology included, this book eliminates the need for obtaining multiple resources to study for the neurology board examination with high-yield information emphasized to highlight key facts. The book is divided into the basic sciences in Part 1 and clinical neurology in Part 2. It features short, easy-to-read chapters to help the busy resident, fellow, and clinician "on the run." In addition to those people preparing to take, or recertify for, the neurology boards, it will also be useful to medical students and residents rotating through neurology or for the generalist with an interest in reviewing neurology.
