The contributors draw on practical and dynamic how-to insights from leading BOP ventures from more than twenty countries world-wide. climate and a general distrust of Wall Street has opened a new cultural divide among those who otherwise agree we must mitigate climate risk: anti-market critics such as Naomi Klein target capitalism itself as a root cause of climate change while climate-savvy business leaders believe we can largely continue with business as usual by tinkering around the edges of our economic system. Rand argues that both sides in this emerging cultural war are ill-equipped to provide solutions to the climate crisis, and each is remarkably naïve in their view of capitalism. On one hand, we cannot possibly transition off fossil fuels without the financial might and entrepreneurial talent market forces alone can unlock. On the other, without radical changes to the way markets operate, capitalism will take us right off the climate cliff. Rejecting the old Left/Right ideologies, Rand develops a more pragmatic view capable of delivering practical solutions to this critical problem. A renewed capitalism harnessed to the task is the only way we might replace fossil fuels fast enough to mitigate severe climate risk. If we leave our dogma at the door, Rand argues, we might just build an economy that survives the century.

In a past of abundance, we had clean water to meet our demands for showers, pools, farms and rivers. Our laws and customs did not need to

regulate or ration demand. Over time, our demand has grown, and scarcity has replaced abundance. We don't have as much clean water as we want. We can respond to the end of abundance with old ideas or adopt new tools specifically designed to address water scarcity. In this book, David Zetland describes the impact of scarcity on our many water uses, how the institutions of abundance fail in scarcity, and how economic ideas and tools can help us direct water to its highest and best use. Written for non-academic readers, *The End of Abundance* provides examples, insights and ideas to anyone interested in the management of our most precious resource.

The economic theories that dominated the field during the 20th century have failed us and empowered government to believe they can manipulate the business cycle. Every economic theory presented post-Marxism has assumed that the complexity of the business cycle can be reduced to a single cause and effect. To date, no attempt to manipulate the cycle has prevented a recession or financial crisis. We now face a truly monumental crisis. Central banks around the world are trapped. Their attempt to stimulate the economy through Quantitative Easing and rate manipulation has disastrously failed. The central banks have primarily purchased government debt, effectively keeping governments on life support by allowing them to issue new debt at substantially lower

rates. In addition to catastrophic Quantitative Easing policies, political fiscal spending on various programs and agencies has burdened governments with a debt that they can never repay. The future crisis is one created by government. This time, we are not likely to fix the problem without major political reform, which all governments will resist. These policies have led many to assume that government can freely create money without inflation. After creating trillions of dollars to buy government debt with no appreciable inflation, many conclude that everything has changed. They are calling this the Modern Monetary Theory. If they are correct, then why bother to have taxes or borrow money continuously with no intention of paying off national debts? Governments, in modern theory, can simply create an endless supply of money to create a new modern version of Utopia. Can we throw away all economic history for an experiment that could unravel civilization if the theory proves to be wrong? What are the risks? Can it really be that easy? Are there any examples from the past that we can look to for answers?

solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.”

–Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” –David Roberts, *Vox* “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” –Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA

In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed

collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

In the face of constant change, the nature of business must evolve rapidly if it is to remain relevant to society at large. How then should business change to meet the requirements of the 21st century, in which unbridled globalization and technological advancements are having profound affects on the wellbeing and prosperity of both the people and the planet? The achievement of purpose is the key to successful transformation - not just having a purpose, but making that purpose real at every level of the organization. This is the first book to provide a precise description of how companies can put purpose into practice. Based on a groundbreaking research project undertaken jointly between the Saïd Business School at the University of Oxford and Mars Catalyst, the think tank of Mars Inc., it provides a highly

accessible account of how companies should determine and implement their corporate purposes. It outlines why corporate purpose is so important and how it can both address the major challenges the world faces today and deliver enhanced performance for business. Fourteen detailed case studies illustrate how companies of different sizes, sectors, and geographies have put purpose into practice and their experiences of doing so. These cases give deep insights into the way in which companies can build purposeful businesses, map and shape their ecosystems, identify failures and problems, align management, and create partnerships to deliver their purposes against which they can measure their performance. The achievement of purpose is a very real issue that every responsible leader in business, finance, and business academia must now face. This book will equip executives, managers, investors, and policymakers with the tools that they require to understand how the notion of corporate purpose should become a corporate reality.
