Food requirements; Pre-agricultural man; primitive and shifting agriculture; Agricultural progress measured in grain equivalents; Production and productivity; Rents and prices of agricultural land; Labour and land; Transport; Consumption; Trade, aid and development.

One of the more perplexing problems of economic development is helping subsistence farmers break away from production simply for home consumption to become commercial farmers, producing more and more for sale in the marketplace. Although subsistence farms occupy 40 percent of the world's cultivated land and support half of mankind, facts about them and programs to increase their output are scattered. Subsistence Agriculture and Economic Development provides a unique overview of these difficulties and their significance to economic development. It is the first book to subject subsistence agriculture to rigorous multi-disciplinary examination and to bring to light new theory and empirical evidence directed toward solving the problem. This volume contains original chapters by forty leading social scientists and agricultural specialists who summarize contemporary theory, fact, and policy on the problems of developing agriculture from subsistence to a commercial basis. Each contributor speaks from one or more of the relevant standpoints of economics, sociology, agronomy, political science, anthropology, and social psychology. There emerges a clear, meaningful picture of the subsistence farmer and the problems involved in changing his attitudes, methods of production, and economic and social environment. Broad in scope, documented with pertinent case studies, and far-reaching in its guidelines for future research and policy, this work should be read by all concerned with increasing food production and with economic development. This is an area of special concern in the uses of food products as the basis for new energy resources - an issue of increasing importance in the advancing use of ethanol as a fuel drawn from corn products.

CD-ROM contains nine html files with embedded jpg. files and 14 color images that were originally part of the bound copy of the thesis.

Interest in the problems of underdeveloped economies has increased since the early 1950s, and is now a primary topic in university courses. When this book was originally published, it reflected a sense among some economists that current, orthodox economic theory is inadequate in this field. The volume includes leading American and non-American economists. The discussion of the content of courses was, in the nature of things, an extension of the discussion on the state of knowledge and reflects the period immediately prior to initial publication. Some of the issues continue to be debated, including the balance of instruction between macro- and micro-economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages, political science, sociology or even engineering. Development economics is now an established subject in the teaching curricula of most universities. The attention of the volume is focused on the problems of creating courses of study in subjects relevant to development within some framework specially designed for the purpose. The problems of organizing such courses concerned the length of courses, the type of students to which they would cater, the qualifications and standards required for admission and successful completion of courses, and so on. The balance of instruction between macro- and micro-economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages (in connection with area studies), political science, sociology or even engineering, the merits of methods like case studies, workshops and training in field work, are all discussed.

Interest in the problems of underdeveloped economies has increased since the early 1950s, and is a primary topic in university courses. This volume includes American and non-American economists. It focuses on the problems of creating courses of study in subjects relevant to development within some framework specially designed for the purpose.

First Published in 1967. This volume includes papers and proceedings presented on the Teaching of development economics (Its Position in the Present State of Knowledge), at the MANCHESTER CONFERENCE ON TEACHING ECONOMIC DEVELOPMENT, APRIL 1964.

The British archaeologist Grahame Clark was a seminal figure in European and world archaeology for more than half of the twentieth century, but, at the same time, one whose reputation has been outshone by other, more visible luminaries. His works were never aimed at a wide general public, nor did he become a television or radio personality. Clark was, above all, a scholar, whose contributions to world archaeology were enormous. He was also convinced that the study of prehistory was important for all humanity and spent his career saying so. For this, he was awarded the prestigious Erasmus Prize in 1990, an award only rarely given to archaeologists. This intellectual biography describes Clark's remarkable career and assesses his seminal contributions to archaeology. Clark became interested in archaeology while at school, studied the subject at Cambridge University, and completed a groundbreaking doctorate on the Mesolithic cultures of Britain in 1931. He followed this study with a magisterial survey, *The Mesolithic Settlement of Northern Europe* (1936), which established him as an international authority on the period. At the same time, he became interested in the interplay between changing ancient environment and ancient human societies. In a series of excavations and important papers, he developed environmental archaeology and the notion of ecological systems as a foundation of scientific, multidisciplinary archaeology, culminating in his world-famous excavations at Starr Carr, England, in 1949 and his *Prehistoric Europe: The Economic Basis* (1952). Clark became Disney Professor of Public Archaeology at Cambridge in 1952 and influenced an entire generation of undergraduates to become archaeologists in all parts of the world. He was also the author of the first book on a global human prehistory, *World Prehistory* (1961).
