~~How to extract data from another workbooks or text files ...~~

From there, we'll loop through each Excel file and call our function - in the below example, we exported 4 worksheets from file> and 2 worksheets from file1: `$ens = Get-ChildItem "C:\ExcelFiles\" -filter *.xlsx foreach($e in $ens) { ExportWSToCSV -excelFileName $e.BaseName -csvLoc "C:\CSVFiles\" }`

~~Extract and convert all Excel worksheets into CSV files ...~~

Method 1: Get List Manually First off, open the specific Excel workbook. Then, double click on a sheet's name in sheet list at the bottom. Next, press "Ctrl + C" to copy the name.

~~3 Quick Ways to Get a List of All Worksheet Names in an ...~~

Easily Combine multiple sheets/Workbook into one Single sheet or Workbook To combine multiple sheets or workbooks into one sheet or workbook may be tedious in Excel, but with the Combine function in Kutools for Excel, you can combine merge dozens of sheets/workbooks into one sheet or workbook, also, you can consolidate the sheets into one by several clicks only.

~~How to collect data from multiple sheets to a master sheet ...~~

In a sheet within the workbook enter the numbers 1,2,3,etc... into column A starting at row 2 and then in cell B2 enter the following formula and copy and paste it down the column until you have a list of all your sheet names. `=INDEX(SheetNames,A2)`

~~How To Generate A List Of Sheet Names From A Workbook ...~~

To get the output on the above shown multiple criteria, we require VBA code. We need to follow the below mentioned steps to launch VB editor. Click on Developer tab. From Code group, select Visual Basic or simply press ALT +F11 to launch VBA screen. Click on Insert, and then on Module.

~~How to extract data to another worksheet using VBA?~~

In the dialog box, enter `=Excel.Workbook ([Content])` and click OK. ...at this time you have a new column in the table but next, you need to extract data from it. Now, open the filter from that newly added custom column and click OK to expand all the data into the table. Here you have the newly expanded table with some new columns.

~~How to Merge [Combine] Multiple Excel FILES into ONE WORKBOOK~~

To get the name of the current worksheet (i.e. current tab) you can use a formula based on the CELL function. CELL retrieves the workbook name and sheet, and the MID and FIND functions are used to extract just the sheet name. In the example shown, the formula in E5 is: `= MID(CELL("filename", A1),FIND("]",CELL("filename", A1)) + 1,255)`

~~Excel formula: Get sheet name only | Exceljet~~

So, the formula, `MATCH (B3,Sheet1!A1:E1,0)`, will return value 3. So, our new formula is: `=INDEX (Sheet1!$A2:$E2, 3)` The interpretation of this part is very simple. Think `A2:E2` as an array and its 3rd value is 75 (as there is no column to do the intersection) as you're seeing in the image below.

~~Using Excel to get data from another sheet based on cell value~~

Here in the Move Or Copy dialog option, select the target sheet and Excel will only display the open worksheets in the list Else, if you want to copy the worksheet instead of moving, then kindly make a copy of the Excel workbook before Lastly, select the OK button to copy or move the targeted Excel spreadsheet.
