This manual is a complete user manual for Garmin handheld receivers. It covers theory and practical applications for gps technology and the receivers that use this technology. Representative products for all of the Garmin handheld receivers, past and present, are explained and tips are given on getting the most out of each model. It is designed to augment the user manuals that are supplied with each product but is complete enough to replace them. While this manual is Garmin specific it provides a basic understanding of gps devices that is applicable to any gps receiver. It was written over a period of 4 years and has been reviewed and tested by hundreds of users over that period. It has been used as the reference for training on gps usage. Because of its unique approach that develops the theory behind operation as well as specific details, it provides a basis that will allow a user to be able to use any gps receiver. Skills in the use of a gps will provide assurance and safety for the user. Topics extend beyond just operating the unit to actually being able to use it for navigation on the land, in the sea, or in the air. Topics are applicable whether you are hiking or driving to your destination. These topics include product operation, waypoints, routes, tracklogs, navigation, maps and databases, product selection, features, theory, accessories, and product unique functions.

A guide to getting the most out of a GPS system provides information on such topics as building and hooking up data cables, modifying the iPAQ cradle, grabbing screenshots, and customizing GPS games.

A step-by-step guide to Microsoft Office SharePoint Server 2007 describes how to set up and configure SharePoint Server, ways to collect and store data, how to build lists and libraries, and how to create portals and Web pages.

Spatial thinking is a constructive combination of concepts of space, tools of representation, and processes of reasoning uses space to structure problems, find answers, and express solutions. It is powerful and pervasive in science, the workplace, and everyday life. By visualizing relationships within spatial structures, we can perceive, remember, and analyze the static and dynamic properties of objects and the relationships between objects. Despite its crucial role underpinning the National Standards for Science and Mathematics, spatial thinking is currently not systematically incorporated into the K-12 curriculum. Learning to Think Spatially: GIS as a Support System in the K-12 Curriculum examines how spatial thinking might be incorporated into existing standards-based instruction across the school curriculum. Spatial thinking must be recognized as a fundamental part of K-12 education and as an integrator and a facilitator for problem solving across the curriculum. With advances in computing technologies and the increasing availability of geospatial data, spatial thinking will play a significant role in the information-based economy of the 21st-century. Using appropriately designed support systems tailored to the K-12 context, spatial thinking can be taught formally to all students. A geographic information system (GIS) offers one example of a high-technology support system that can enable students and teachers to practice and apply spatial thinking in many areas of the curriculum.
