Linear Algebra for Everyone, Gilbert Strang

This book is designed to help students understand and solve the four central problems of linear algebra that involve: (1) linear systems, (2) least squares, (3) eigenvalues, and (4) singular values. The diagram on the front cover shows the four fundamental subspaces for the matrix A. Those subspaces lead to the Fundamental Theorem of Linear Algebra: (1) The dimensions of the four subspaces, (2) The orthogonality of the two pairs, and (3) The best bases for all four subspaces.
