of the architectural concepts upon which Java Enterprise System deployments are based. The chapter describes a framework in which Java Enterprise System deployment architectures is analyzed along three dimensions: logical tiers, infrastructure service levels, and quality of service. These three dimensions, shown schematically as orthogonal axes in the following figure, help to clarify the architectural functions of Java Enterprise System components.

Chapter 2 Java Enterprise System Architecture

J2EE Architecture is made up of three tier, such as the client tier that is used as an interactive medium for the end user or the

Enterprise Applications Jakarta EE, formerly Java Platform, Enterprise Edition and Java 2 Platform, Enterprise Edition is a set of specifications, extending Java SE 8 with specifications for enterprise features such as distributed computing and web services. Jakarta EE applications are run on reference runtimes, that can be microservices or application servers, which handle transactions, security, scalability, concurrency and management of the components it is deploying. Jakarta EE is defined by its specification. The
