Happy Brain, Happy Life | Psychology Today

To understand why, we have to go back to what makes the brain happy. When a well-established schema is called into question by new information, the brain reacts as if threatened. The amygdalae fires up (threat response), and the ventral striatum revs down (reward response). This is not a comfortable place for the brain.

What makes your brain happy and why you should do the ...

Biofeedback is just the idea that your brain is always sensing what is happening in your body and it reviews that information to decide how it should feel about the world. You feel happy and that makes you smile. But it works both ways: when you smile, your brain can detect this and say, "I'm smiling. That must mean I'm happy."
